

WORD 2010

microsoft word processor

About the Tutorial

Microsoft Office Word 2010 allows you to create and edit personal and business documents, such as letters, reports, invoices, emails and books.

i

Additional Help

For additional support, please contact the **Jolis ICT Academy** Service Desk:

- Phone: [+256 752 567374](tel:+256752567374)
- Email: info@jolisacademy.com
- Website: <https://www.jolisacademy.com>

By default, documents saved in Word 2010 are saved with the **.docx** extension. Microsoft Word can be used for the following purposes:

- To create business documents having various graphics including pictures, charts, and diagrams.
- To store and reuse readymade content and formatted elements such as cover pages and sidebars.
- To create letters and letterheads for personal and business purpose.
- To design different documents such as resumes or invitation cards etc.
- To create a range of correspondence from a simple office memo to legal copies and reference documents.

Audience

This tutorial has been designed for computer users who are willing to learn Microsoft Word in simple steps and they do not have much knowledge about computer usage and Microsoft applications. This tutorial will give you enough understanding on MS Word from where you can take yourself to higher levels of expertise.

Prerequisites

Before you begin with this tutorial, we assume you have a basic understanding of Computer peripherals like mouse, keyboard, monitor, screen, etc. and their basic operations.

Table of Contents

MS WORD BASICS	0
1. Word 2010 – Getting Started	1
2. Word 2010 – Explore Window	5
3. Word 2010 – Backstage View	8
Document Information	
10	
Document Properties	10
Exit Backstage View	10
4. Word 2010 – Entering Text.....	11
5. Word 2010 – Move .Around	13
Moving with Mouse	
13	
Moving with Scroll Bars	14
Moving with Keyboard	15
Moving with Go To Command	16
6. Word 2010 – Save Document	
17 Saving New Document	
17	
Saving New Changes	18
7. Word 2010 – Opening a Document	20
Opening New Document	20
Opening Existing Document	22
8. Word 2010 – Closing a Document	25
9. Word 2010 – Context Help	28
Context Sensitive Help	
28	
Using F1 Key	28
Using Help Icon	30
Using Help Option	31

EDITING DOCUMENTS	
32	
10. Word 2010 – Insert Text	
33 Insert and Add Text	33
Insert and Replace Text	35
11. Word 2010 – Select Text	
40 Using the Selection Bar.....	41
Using the Keyboard	42
12. Word 2010 – Delete Text	
43	
Using Backspace & Delete Keys	43
Using Selection Method	44
13. Word 2010 – Move Text	
46	
Move within the same document	46
Move within different documents	47
14. Word 2010 – Copy & Paste	
51	
Copy & Paste Operation	51
Cut & Paste Operation	54
Copy, Cut & Paste in different documents	56
15. Word 2010 – Find & Replace	
57	
Find Command	57
Find & Replace Operation	61
16. Word 2010 – Spell Check	
63	
Check Spelling and Grammar using Review tab	64
Check Spelling and Grammar using Right Click	67
17. Word 2010 – Zoom In-Out.....	
68	
Zoom-in & Zoom-out using view tab	68
Zoom-in & Zoom-out using (+) and (-) Buttons	70
18. Word 2010 – Special Symbols	
71	
Insert Special Symbols	71
Assign Shortcut Key	74

1. Word 2010 – Getting Started

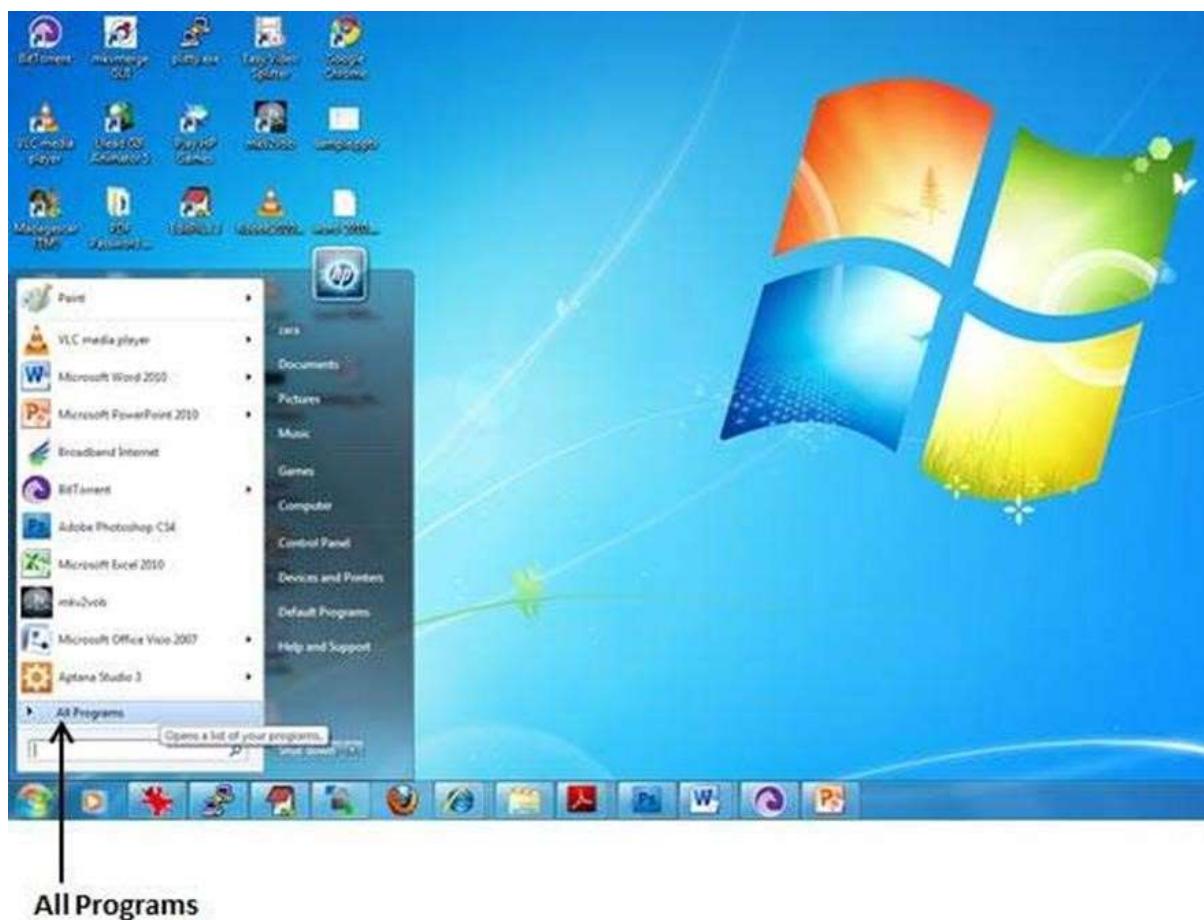

MS Word Basics

In this chapter, we will discuss how to get started with Word 2010. We will understand how to start a Word 2010 application in simple steps. Assuming you have Microsoft Office 2010 installed in your PC, to start the Word application, follow these steps:

Step 1: Click the **Start** button.

Step 2: Click the **All Programs** option from the menu.

Step 3: Search for **Microsoft Office** from the submenu and click it.

Microsoft Office

Step 4: Search for **Microsoft Word 2010** from the submenu and click it.

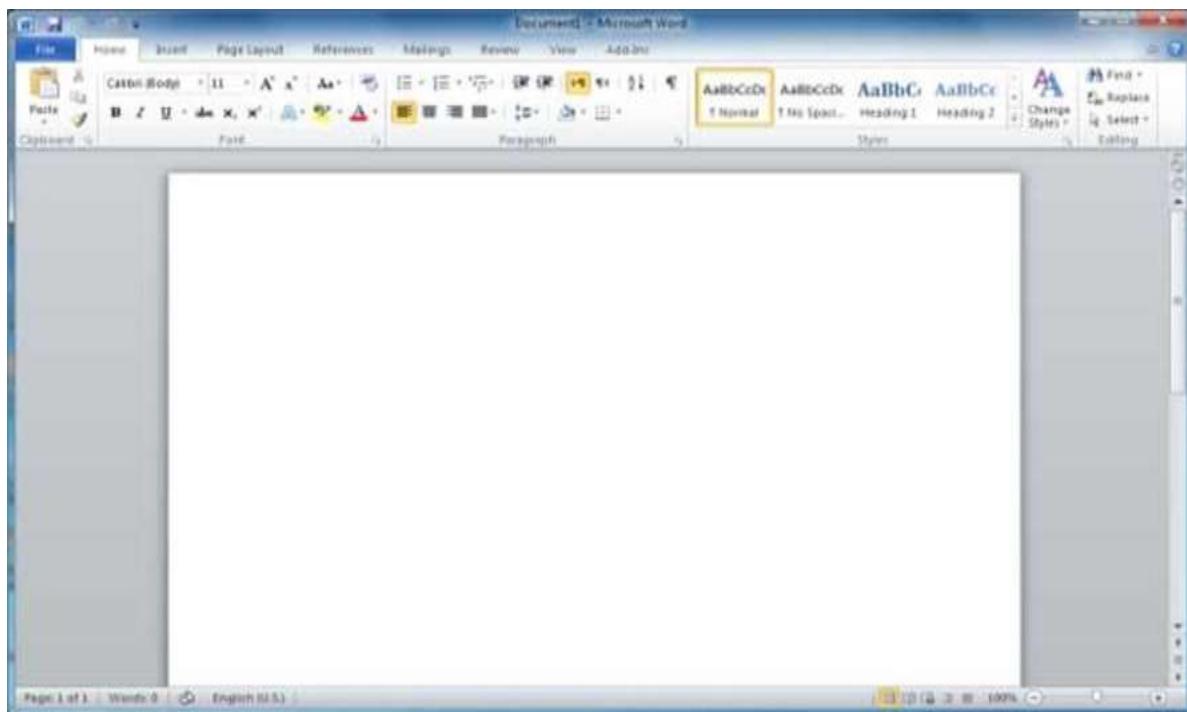

Microsoft Word 2010

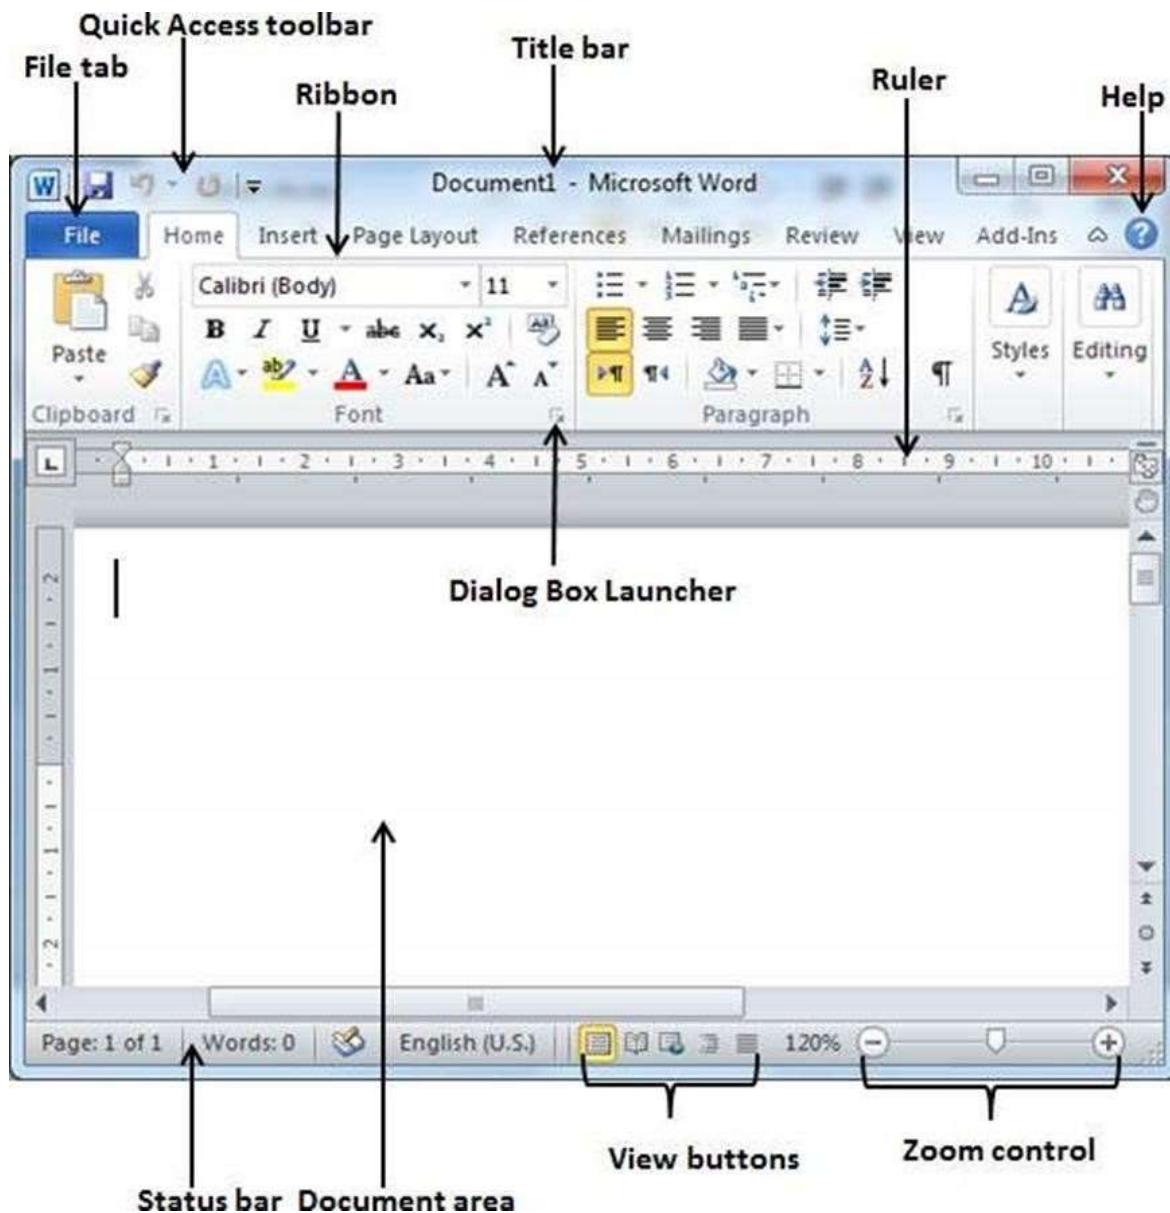

Word 2010

This will launch the Microsoft Word 2010 application and you will see the following window.

2. Word 2010 – Explore Window

In this chapter, we will understand how to explore Window in Word 2010. Following is the basic window which you get when you start the Word application. Let us understand the various important parts of this window.

File Tab

The File tab replaces the Office button from Word 2007. You can click it to check the **Backstage view**. This is where you come when you need to open or save files, create new documents, print a document, and do other file-related operations.

Word 2010

Quick Access Toolbar

This you will find just above the **File tab**. This is a convenient resting place for the mostfrequently used commands in Word. You can customize this toolbar based on your comfort.

Ribbon

Ribbon contains commands organized in three components:

- **Tabs:** These appear across the top of the Ribbon and contain groups of related commands. Home, Insert, Page Layout are examples of ribbon tabs.
- **Groups:** They organize related commands; each group name appears below the group on the Ribbon. For example, group of commands related to fonts or group of commands related to alignment, etc.
- **Commands:** Commands appear within each group as mentioned above.

Title bar

This lies in the middle and at the top of the window. Title bar shows the program and document titles.

Rulers

Word has two rulers - a horizontal ruler and a vertical ruler. The horizontal ruler appears just beneath the Ribbon and is used to set margins and tab stops. The vertical ruler appears on the left edge of the Word window and is used to gauge the vertical position of elements on the page.

Help

The **Help Icon** can be used to get word related help anytime you like. This provides nice tutorial on various subjects related to word.

Zoom Control

Zoom control lets you zoom in for a closer look at your text. The zoom control consists of a slider that you can slide left or right to zoom in or out; you can click the + buttons to increase or decrease the zoom factor.

View Buttons

The group of five buttons located to the left of the Zoom control, near the bottom of the screen, lets you switch through the Word's various document views.

3. Word 2010 – Backstage View

- **Print Layout view:** This displays pages exactly as they will appear when printed.
 - **Full Screen Reading view:** This gives a full screen view of the document.
- **Web Layout view:** This shows how a document appears when viewed by a Web browser, such as Internet Explorer.
- **Outline view:** This lets you work with outlines established using Word's standard heading styles.
- **Draft view:** This formats text as it appears on the printed page with a few exceptions. For example, headers and footers aren't shown. Most people prefer this mode.

Document Area

This is the area where you type. The flashing vertical bar is called the insertion point and it represents the location where text will appear when you type.

Status Bar

This displays the document information as well as the insertion point location. From left to right, this bar contains the total number of pages and words in the document, language, etc.

You can configure the status bar by right-clicking anywhere on it and by selecting or deselecting options from the provided list.

Dialog Box Launcher

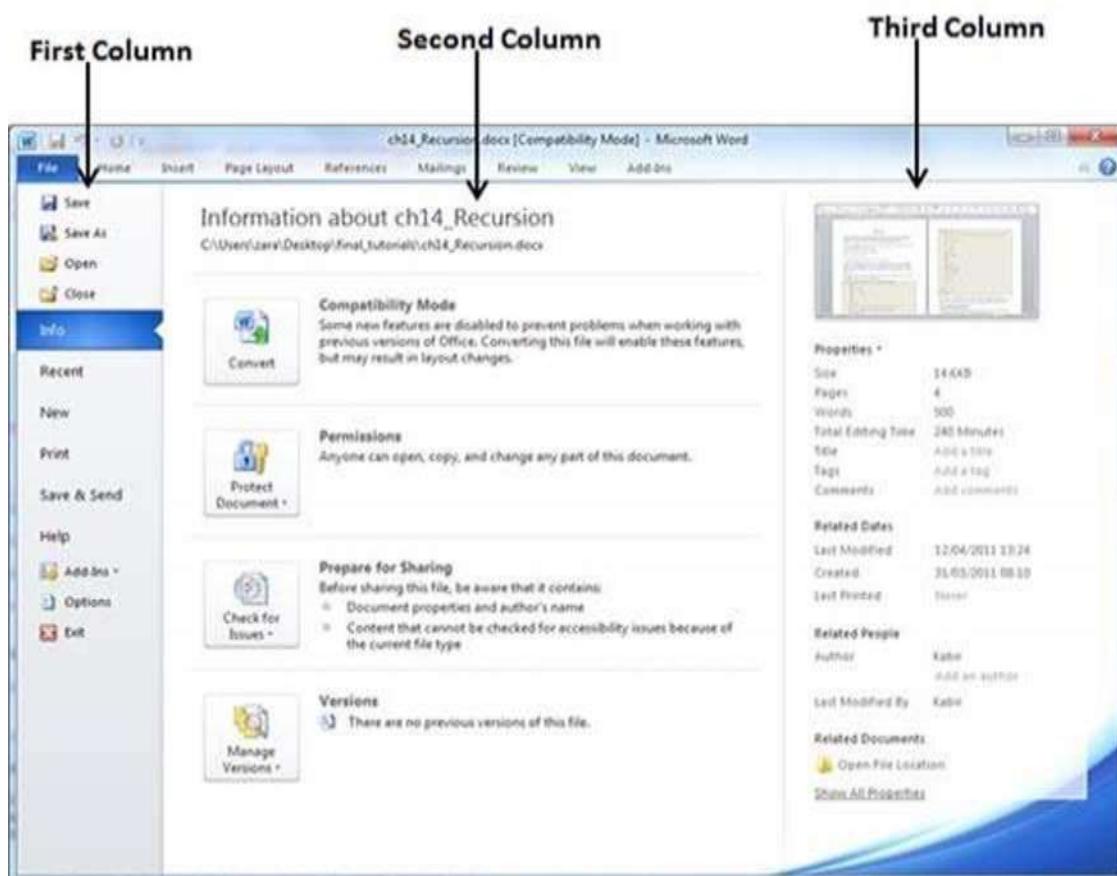

This appears as very small arrow in the lower-right corner of many groups on the Ribbon. Clicking this button opens a dialog box or task pane that provides more options about the group.

In this chapter, we will discuss the Backstage View in Word 2010. The **Backstage view** was introduced in Word 2010. This acts as the central place for managing your documents. The backstage view helps in creating new documents, saving and opening documents, printing and sharing documents, and so on.

Getting to the Backstage View is easy: Just click the **File tab**, located in the upper-left corner of the Word Ribbon. If you already do not have any opened document, then you will see a window listing down all the recently opened documents as follows:

If you already have an opened document, then it will display a window showing detail about the opened document as shown below. Backstage view shows three columns when you select most of the available options in the first column.

The first column of the backstage view will have following options:

Option	Description
Save	If an existing document is opened, it will be saved as is, otherwise it will display a dialogue box asking for the document name.
Save As	A dialogue box will be displayed asking for document name and document type, by default it will save in word 2010 format with extension .docx .
Open	This option is used to open an existing word document.
Close	This option is used to close an open document.
Info	This option displays information about the opened document.

Recent	This option lists down all the recently opened documents
Word 2010	

New	This option is used to open a new document.
Print	This option is used to print an open document.
Save & Send	This option will save an open document and will display options to send the document using email, etc.
Help	This option is used to get the required help about Word 2010.
Options	This option is used to set various option related to Word 2010.
Exit	Use this option to close the document and exit.

Document Information

When you click the **Info** option available in the first column, it displays the following information in the second column of the backstage view:

- **Compatibility Mode:** If the document is not a native **Word 2007/2010** document, a **Convert** button appears here, enabling you to easily update its format. Otherwise, this category does not appear.
- **Permissions:** You can use this option to protect your word document. You can set a password so that nobody can open your document, or you can lock the document so that nobody can edit your document.
- **Prepare for Sharing:** This section highlights important information you should know about your document before you send it to others, such as a record of the edits you made as you developed the document.
- **Versions:** If the document has been saved several times, you may be able to access the previous versions of it from this section.

Document Properties

When you click the **Info** option available in the first column, it displays various properties in the third column of the backstage view. These properties include the document size, the number of pages in the document, the total number of words in the document, the name of the author etc.

You can also edit various properties by clicking on the property value and if the property is editable, then it will display a text box where you can add your text like title, tags, comments, Author.

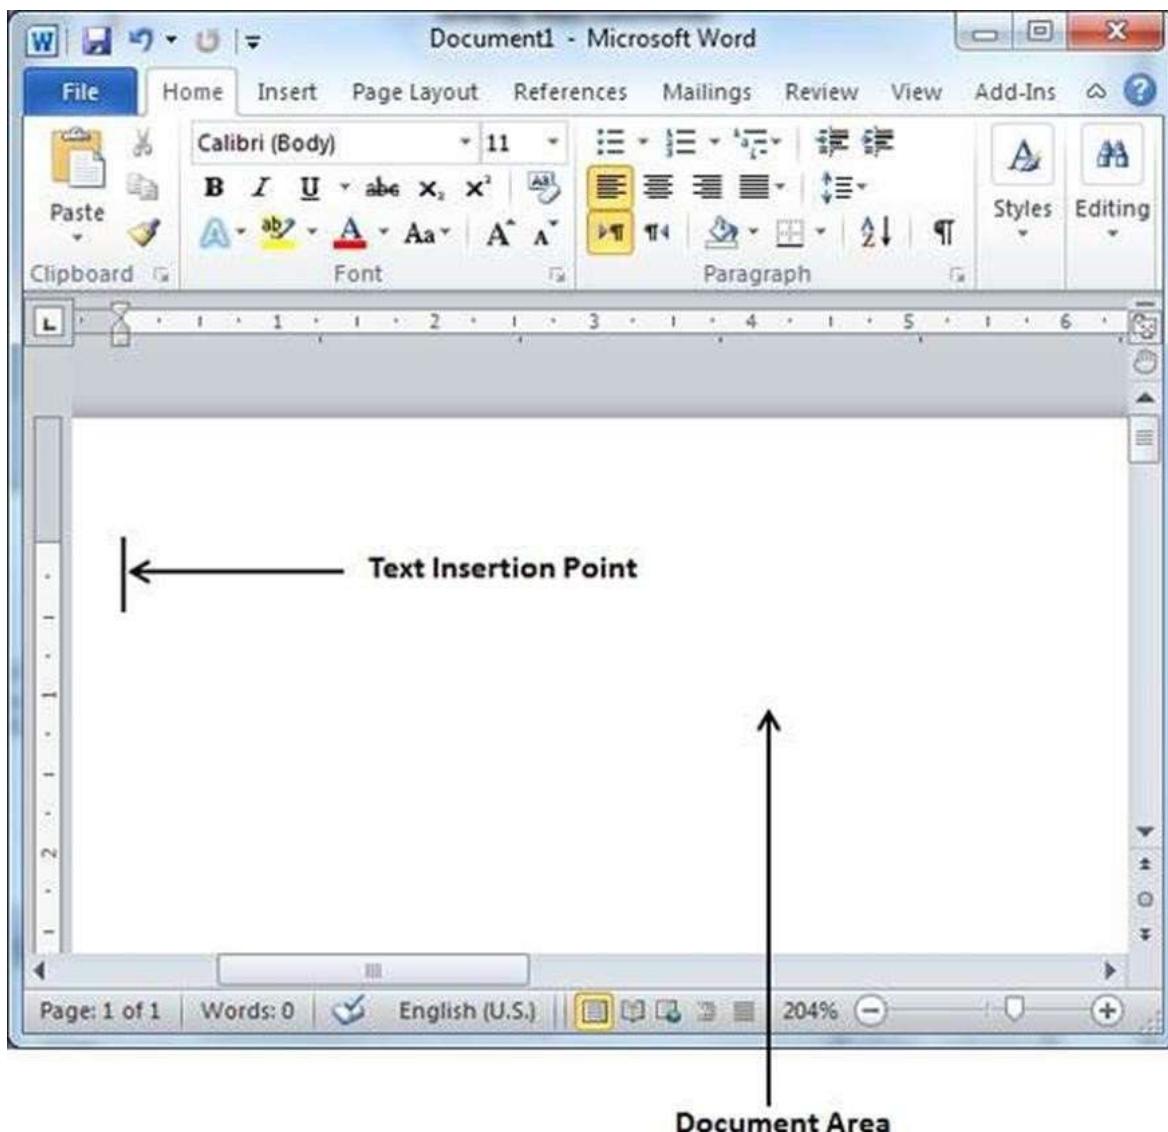

Exit Backstage View

It is simple to exit from the Backstage View. Either click on the **File tab** or press the Esc button on the keyboard to go back to the working mode of Word.

4. Word 2010 – Entering Text

us see how easy it is to enter text in a Word document. We assume you know that when you start Word, it displays a new document by default as shown below:

Document area is the area where you type your text. The flashing vertical bar is called the insertion point and it represents the location where the text will appear when you type. keep the cursor at the text insertion point and start typing the text. We typed only two words "Hello Word" as shown below. The text appears to the left of the insertion point as you type:

The following are the two important points that will help you while typing:

- You do not need to press Enter to start a new line. As the insertion point reaches the end of the line, Word automatically starts a new one. You will need to press Enter, to add a new paragraph.
 - When you want to add more than one space between words, use the Tab key instead of the spacebar. This way you can properly align text by using the proportional fonts.

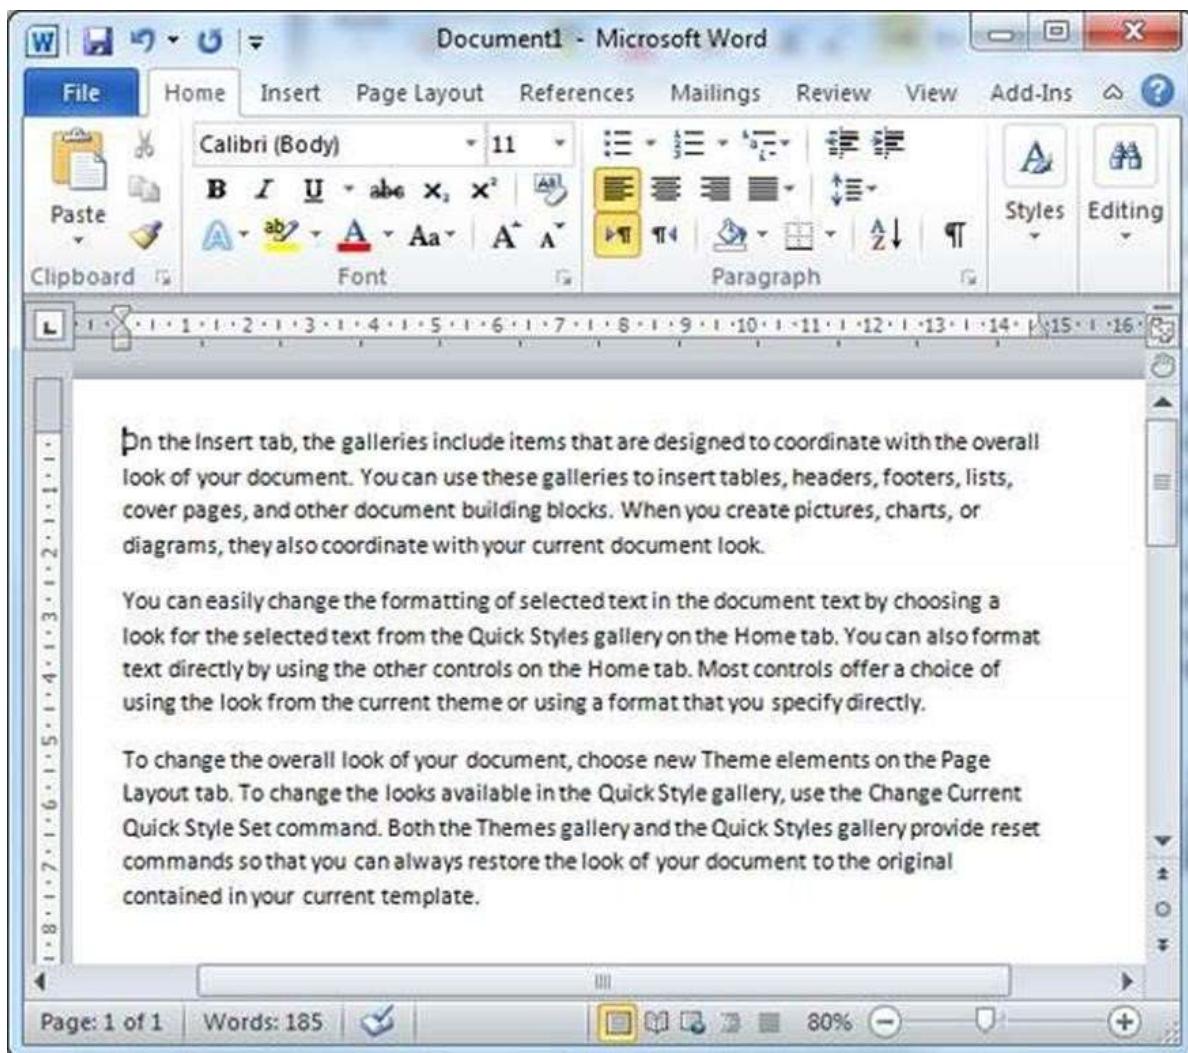

In this chapter, we will discuss how to move around in Word 2010. Word provides a number of ways to move around a document using the mouse and the keyboard.

To begin with, let us create some sample text. To create a sample text, there is

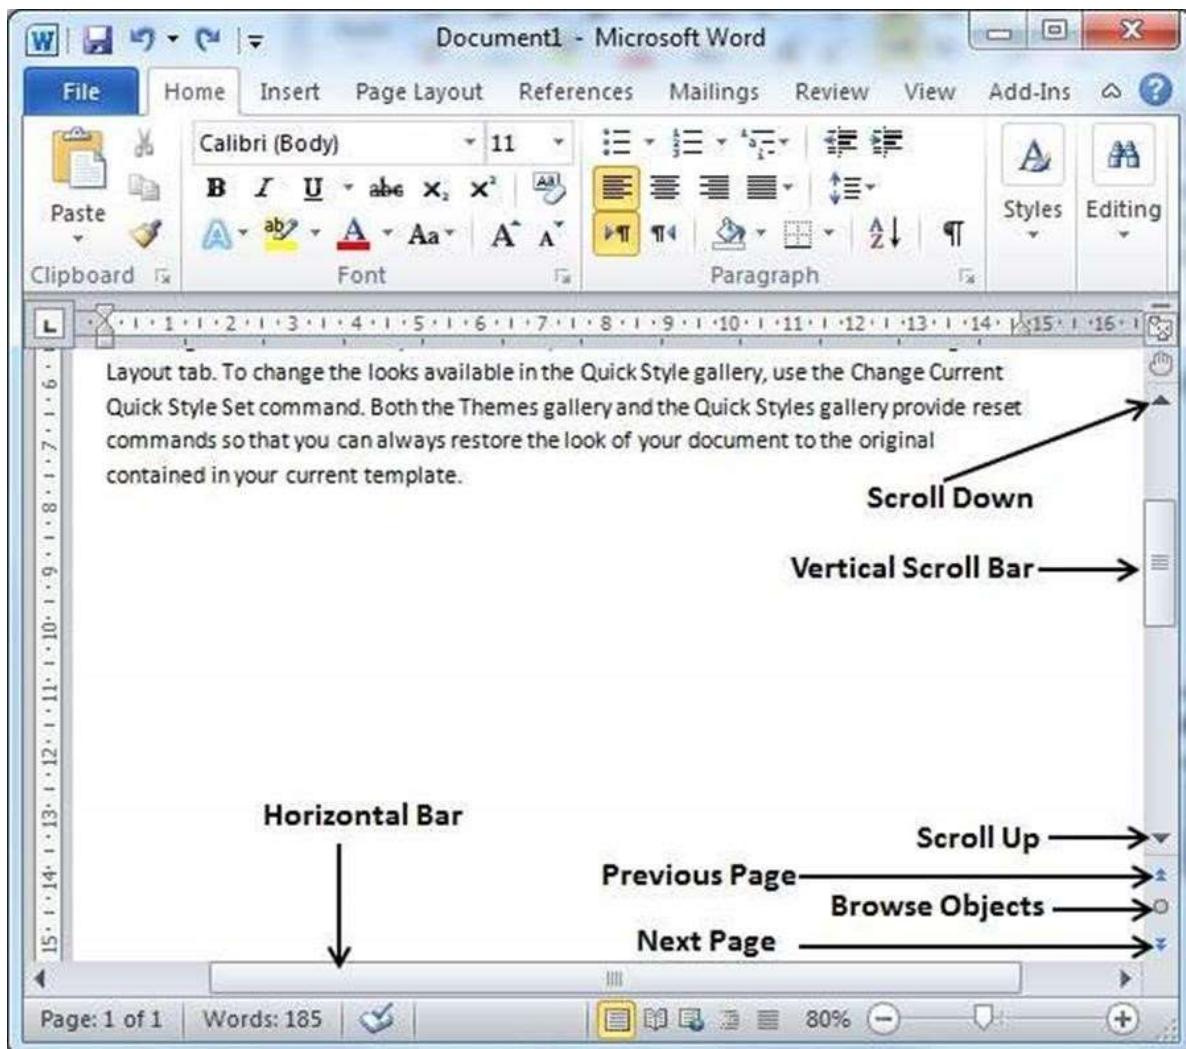

5. Word2010– Move Around

a short cut available. Open a new document and type =rand() and press Enter. Word will create the following content for you:

Moving with Mouse

You can easily move the insertion point by clicking in your text anywhere on the screen. There may be instances when a document is big and you cannot see a place where you want to move. Here, you will have to use the scroll bars, as shown in the following screenshot:

You can scroll through your document by rolling your mouse wheel, which is equivalent to clicking the up-arrow or down-arrow buttons in the scroll bar.

Moving with Scroll Bars

As shown in the above screenshot, there are two scroll bars: one for moving vertically within the document, and one for moving horizontally. Using the vertical scroll bar, you may:

- Move upward by one line by clicking the upward-pointing scroll arrow.
- Move downward by one line by clicking the downward-pointing scroll arrow.
- Move one next page, using the next page button (footnote).
- Move one previous page, using the previous page button (footnote).
- Use the **Browse Object** button to move through the document, going from one chosen object to the next.

Moving with Keyboard

The following keyboard commands, used for moving around your document, also move the insertion point:

Keystroke	Where the Insertion Point Moves
→	Forward one character
←	Back one character
↑	Up one line
↓	Down one line
PageUp	To the previous screen
PageDown	To the next screen
Home	To the beginning of the current line

Additional Help

For additional support, please contact the **Jolis ICT Academy** Service Desk:

- Phone: [+256 752 567374](tel:+256752567374)
- Email: info@jolisacademy.com
- Website: <https://www.jolisacademy.com>

End	To the end of the current line
------------	--------------------------------

You can move word by word or paragraph by paragraph. You would have to hold down the Ctrl key while pressing an arrow key, which moves the insertion point as described here:

Key Combination	Where the Insertion Point Moves
Ctrl + →	To the next word
Ctrl + ←	To the previous word
Ctrl + ↑	To the start of the previous paragraph
Ctrl + ↓	To the start of the next paragraph
Ctrl + PageUp	To the previous browse object
Ctrl + PageDown	To the next browse object
Ctrl + Home	To the beginning of the document
Ctrl + End	To the end of the document

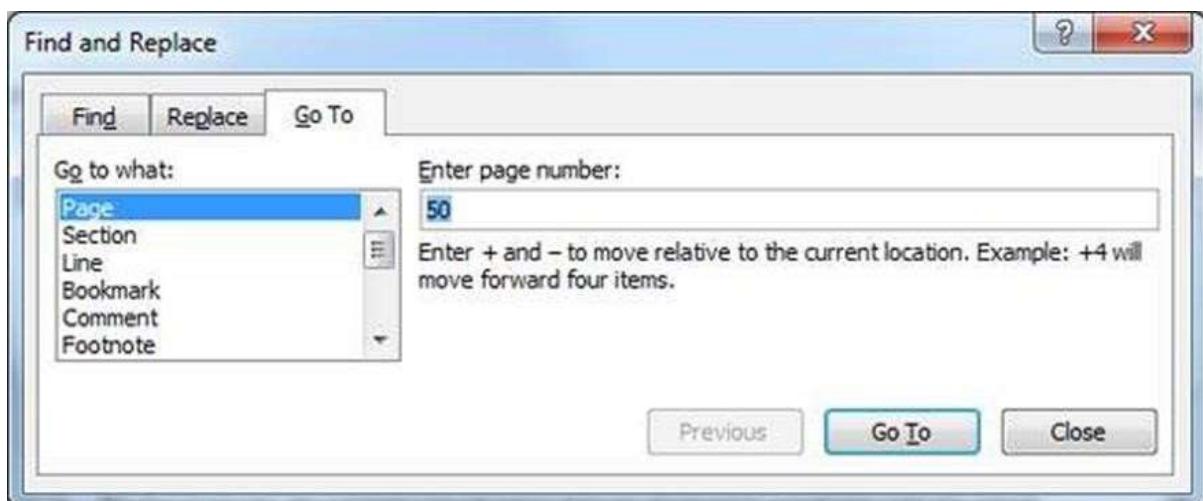

6. Word 2010 – Save Document

Shift + F5	To the last place you changed in your document.
-------------------	---

Moving with Go To Command

Press the **F5** key to use the **Go To** command. This will display a dialogue box where you will have various options to reach to a particular page.

Normally, we use the page number, the line number or the section number to go directly to a particular page and finally press the **Go To** button.

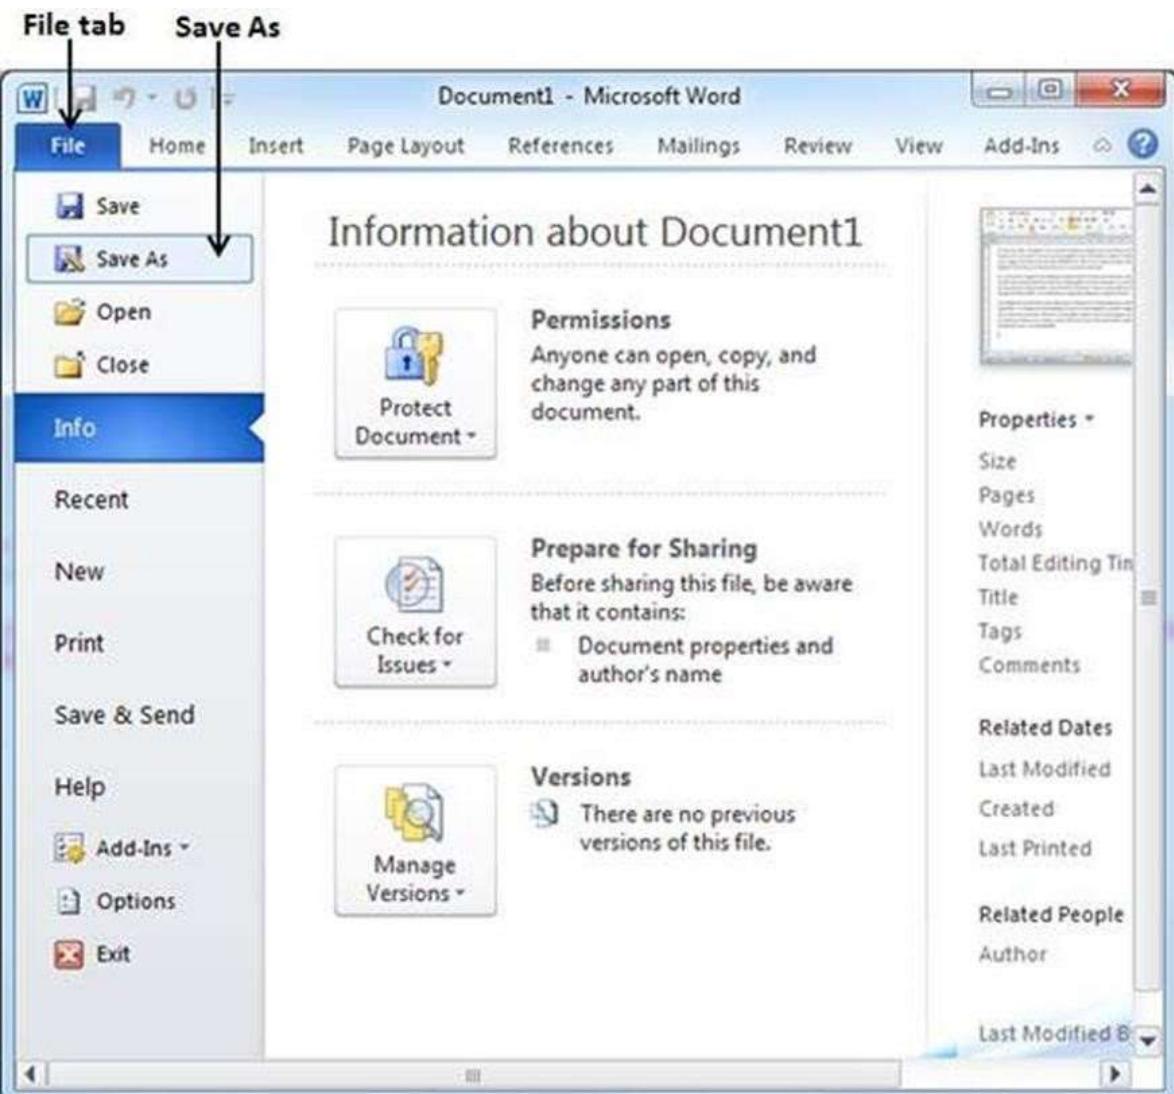

In this chapter, we will discuss how to save a document in Word 2010.

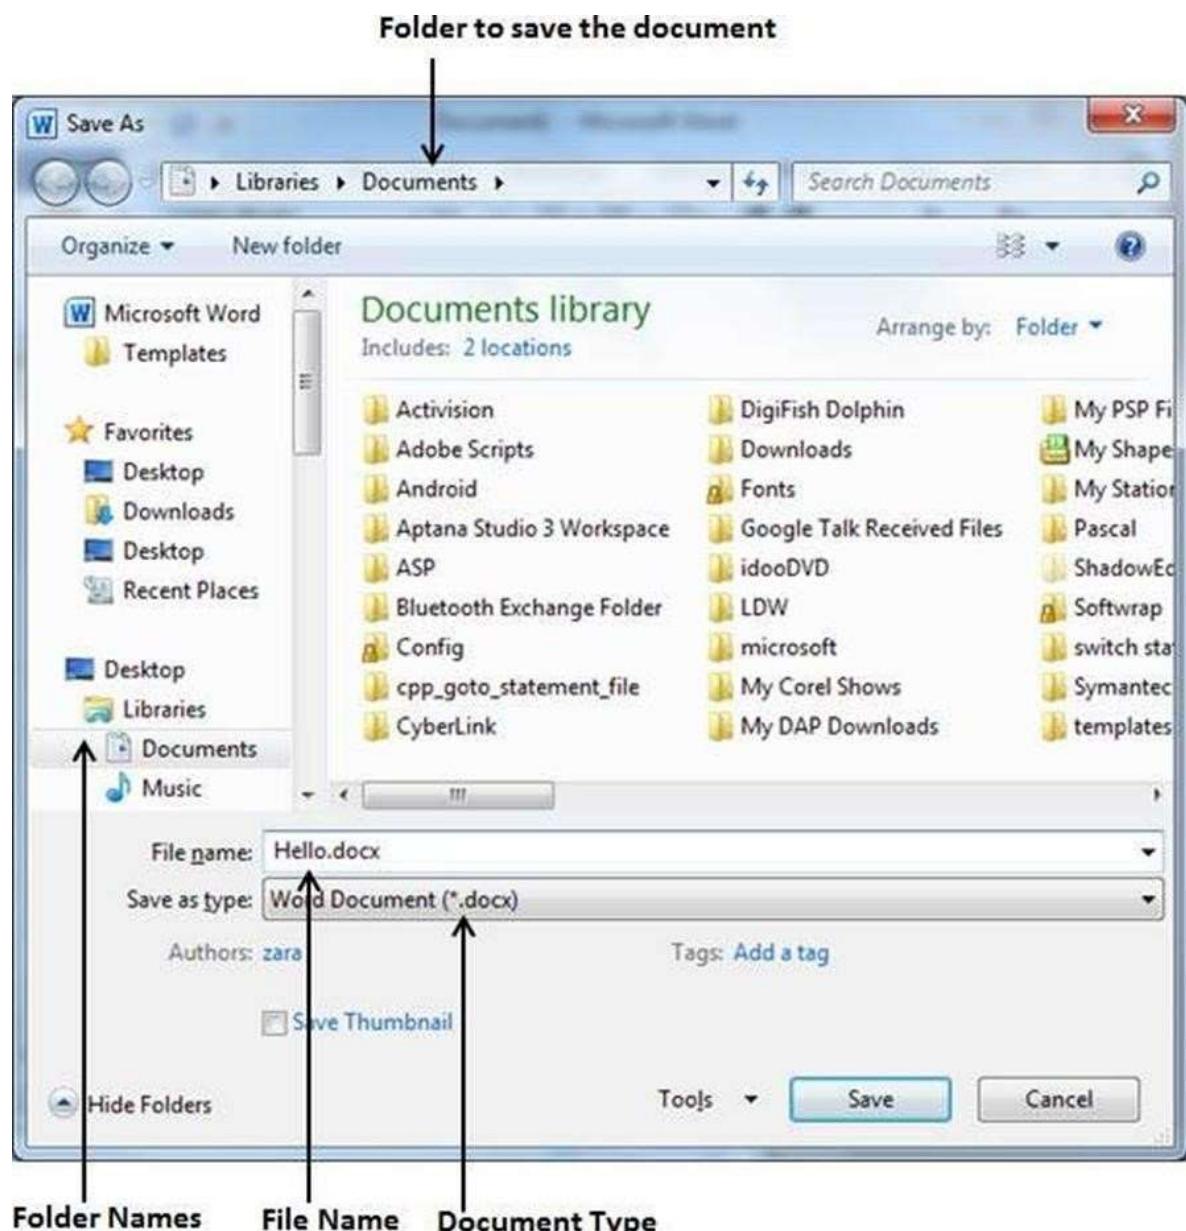

Saving New Document

Once you are done with typing in your new Word document, it is time to save your document to avoid losing work you have done on a Word document. Following are the steps to save an edited Word document:

Step 1: Click the **File tab** and select the **Save As** option.

Step 2: Select a folder where you will like to save the document, Enter the file name which you want to give to your document and Select the **Save As** option, by default it is the **.docx** format.

Step 3: Finally, click on the **Save** button and your document will be saved with the entered name in the selected folder.

Saving New Changes

There may be an instance when you open an existing document and edit it partially or completely, or an instance where you may like to save the changes in between editing of the document. If you want to save this document with the same name, then you can use either of the following simple options:

- Just press the **Ctrl + S** keys to save the changes.
- Optionally you can click on the floppy icon available at the top left corner and just above the **File tab**. This option will also help you save the changes.
- You can also use the third method to save the changes, which is the **Save** option available just above the **Save As** option as shown in the above screenshot.

If your document is new and it was never saved so far, then with either of the three options, Word will display a dialogue box to let you select a folder, and enter the document name as explained in case of saving new document.

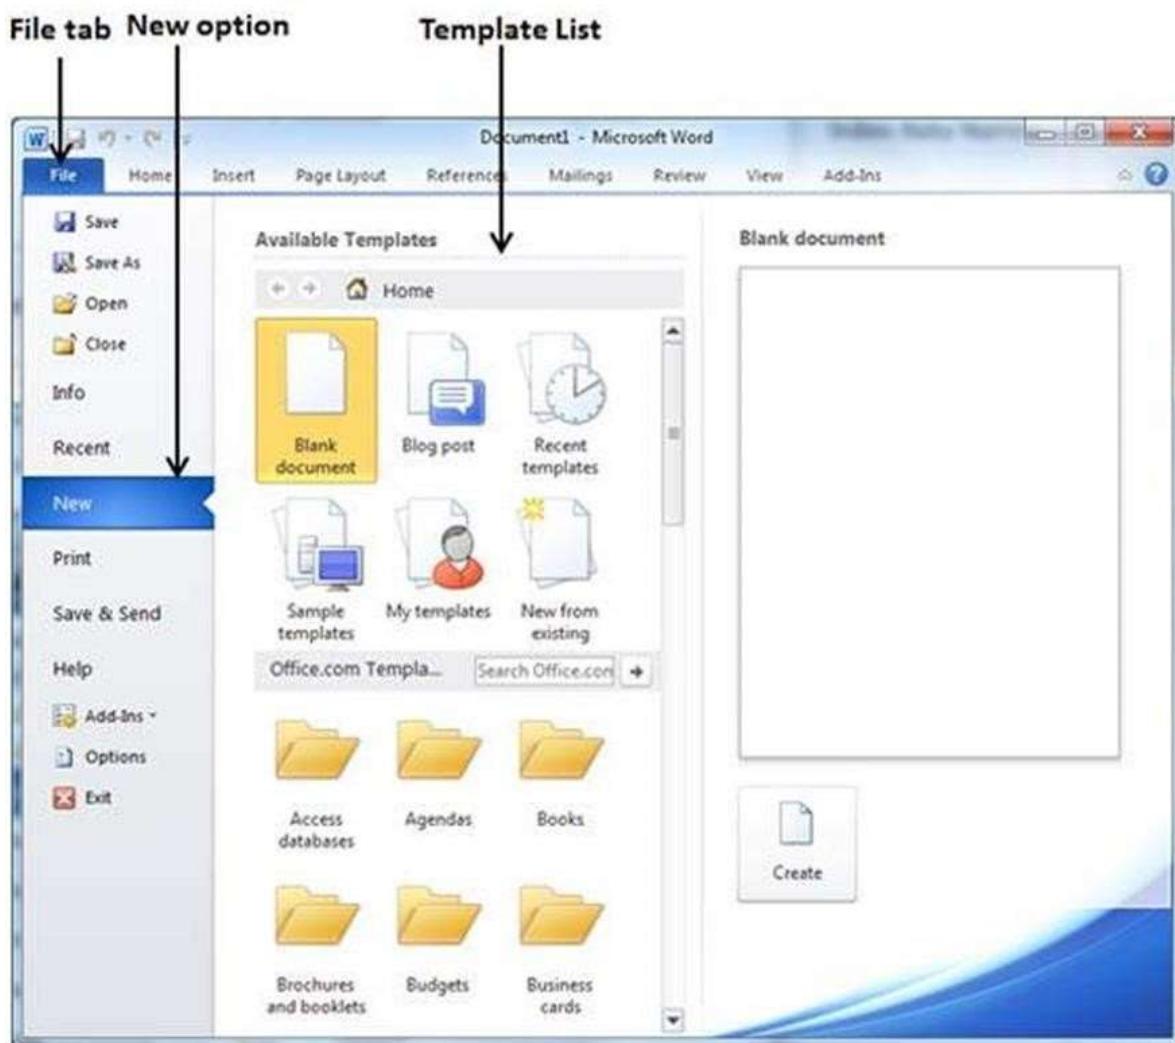

7. Word 2010–Opening a Document

In this chapter, we will discuss how to open a document in Word 2010.

Opening New Document

A new, blank document always opens when you start Microsoft Word. Suppose you want to start another new document while you are working on another document, or you closed an already opened document and want to start a new document. Here are the steps to open a new document:

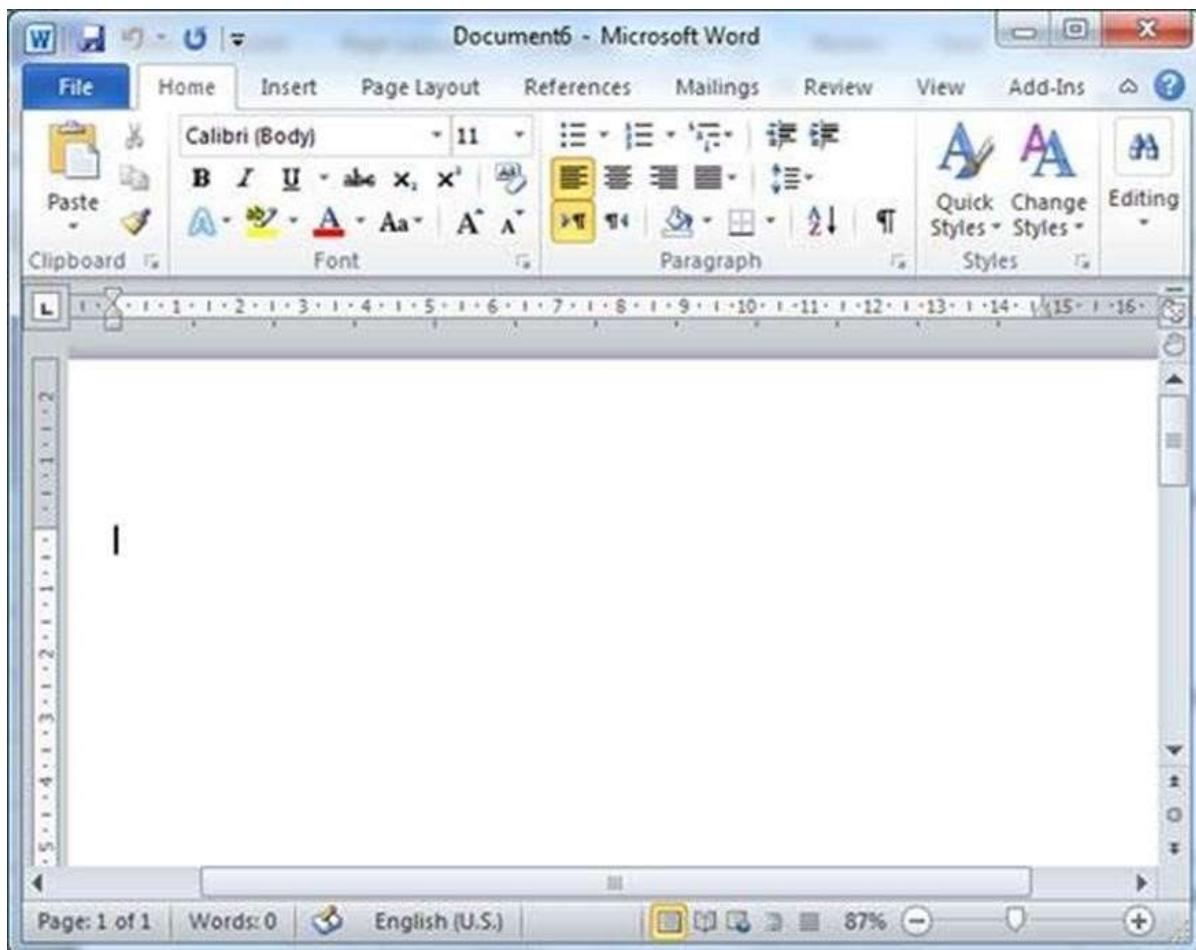

Step 1: Click the **File tab** and select the **New** option.

Step 2: When you select the **New** option from the first column, it will display a list of templates in the second column. Double-click on the **Blank document**; this is the first

option in the template list. We will discuss the other templates available in the list in the following chapters.

You should have your blank document as shown below. The document is now ready for you to start typing your text.

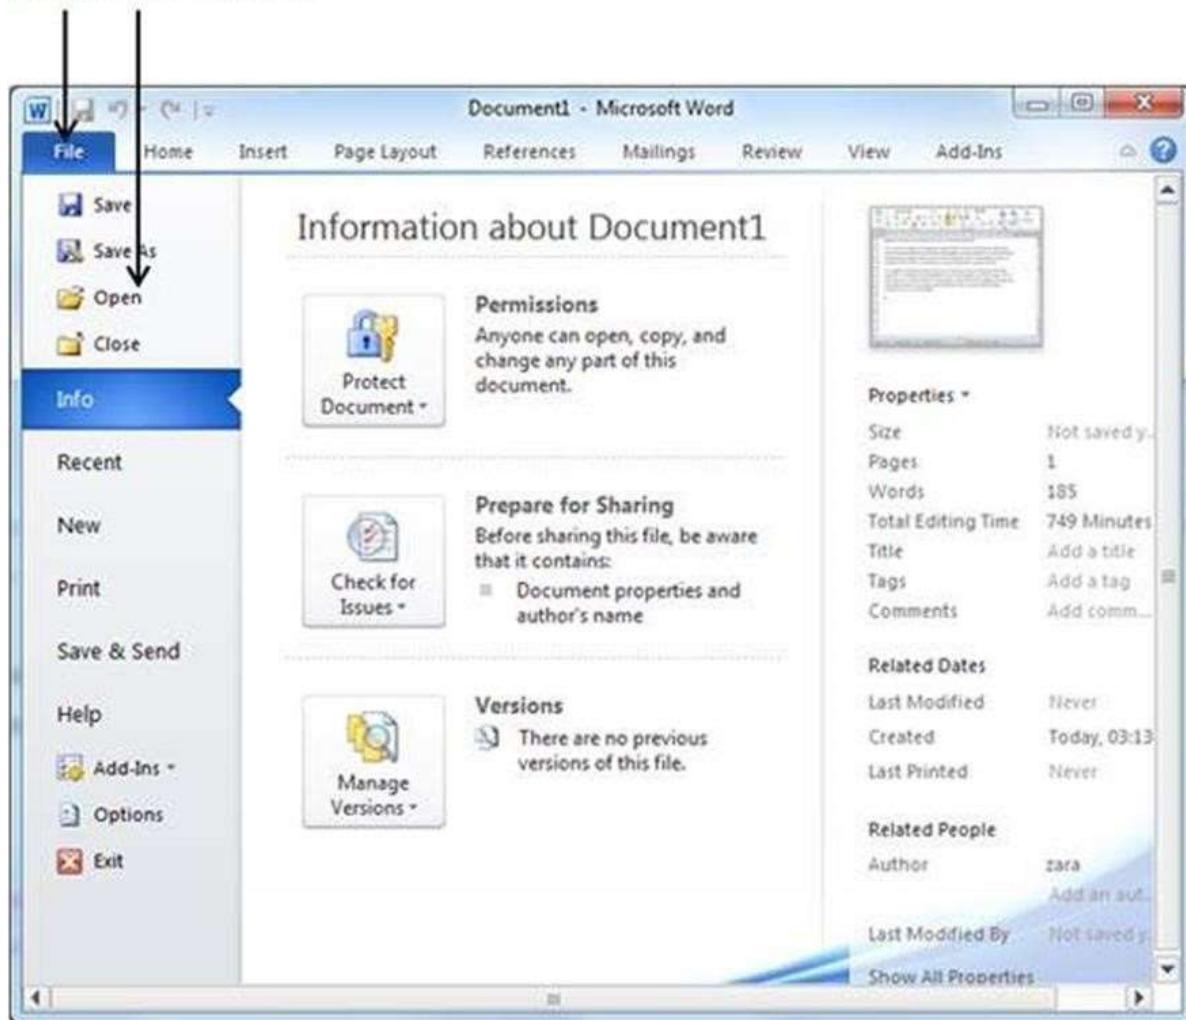

You can use a shortcut to open a blank document anytime. Try using the **Ctrl + N** keys and you will see a new blank document similar to the one in the above screenshot.

Opening Existing Document

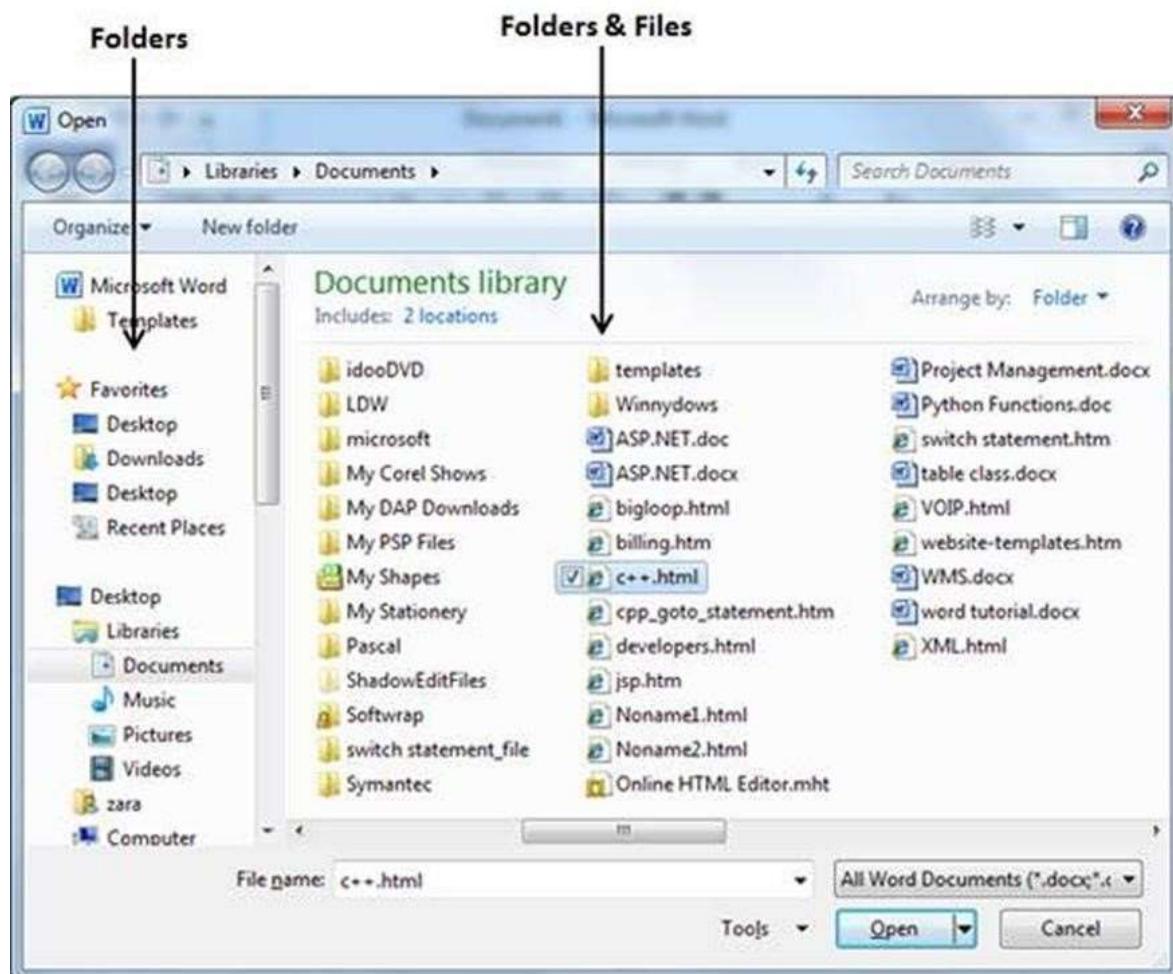

There may be a situation when you open an existing document and edit it partially or completely. Follow the steps given below to open an existing document:

Step 1: Click the **File tab** and select the **Open** option.

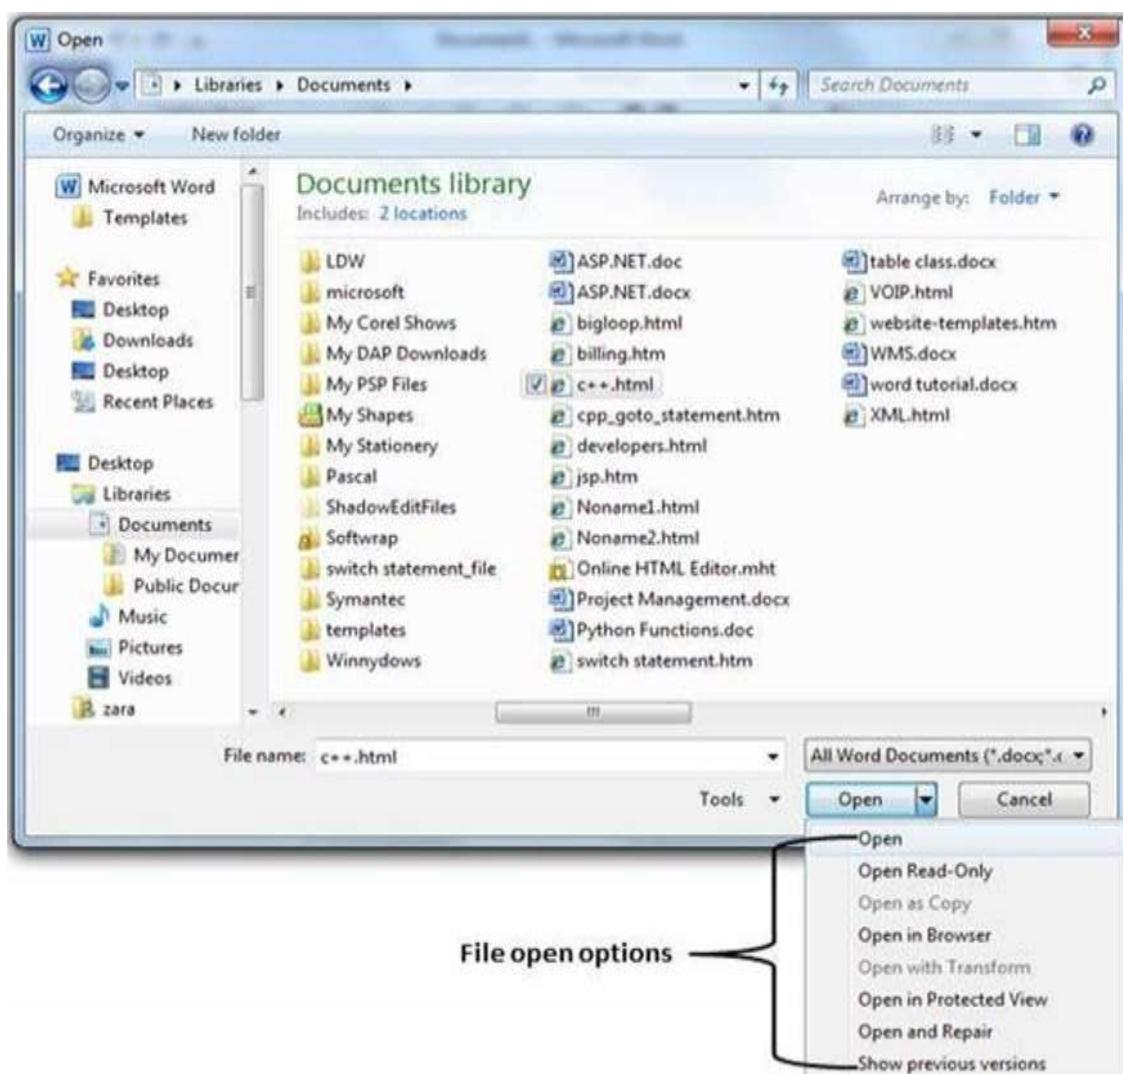

File tab Open option

Step 2: This will display the following file **Open dialog box**. This lets you navigate through different folders and files, and also lets you select a file which you want to open.

Step 3: Finally, locate and select a file which you want to open and click the small triangle available on the **Open** button to open the file. You will have different options to open the file, but simply use the **Open** option.

This will open your selected file. You can use the **Open Read-Only** option if you are willing just to read the file and you have no intention to modify, i.e., edit the file. Other options can be used for advanced usage.
